PROJECT

Al-Iman Mosque

ACTIVITY	QTY	RATE	AMOUNT
Electrical Testing	1	2,000.00	2,000.00

1. Provide skilled technicians to check and troubleshoot existing wiring and checking of 6 DBs and load for the mosque.

2. Provision EMA Registered LEW with approved technicians to carry out Electrical Audit and Integrity test on the electrical system for the Al-Iman Mosque in accordance with SS638

Work scope to:

1. Conduct visual inspection on non-compliance including checking of existing wiring, checking of re-wiring previously done by landlord, if applicable and compliance with wiring as per SS638

2. Conduct Insulation test (Megger test) - Megger test checks integrity of the electrical wiring insulation.

3. Conduct Earth Loop Impedance test

An earth loop impedance test is conducted to make sure that, if a fault occurs in an electrical circuit, the fault current will strong be enough to set off the circuit protection. If a fault current is left undetected, circuits can overheat and catch on fire.

3. Conduct RCD test -

RCD testing induces various levels of leakage current into the electrical system in a safe manner; this allows the electrician to evaluate the overall level of when an RCD will 'trip' the circuit, and it also allows evaluation of the trip time (the time period it takes the RCD to activate).

4. Conduct polarity test -

It is a test conducted on both the primary and secondary windings of a transformer and also to know the direction of the current.

Report shall be provided pointing out extend of workscope for rectification required.
